

Andrea Myaboo

Mumbai, Maharashtra | 9819430929 | andreamyaboo777@gmail.com

Summary

Creative, detail-oriented and dynamic software developer with prominent emphasis on UI and frontend web development. Proficient in designing and developing intuitive and responsive user interfaces with Java-script libraries. Demonstrates strong team collaboration skills, engaging with cross functional teams to build and enhance features while seamlessly integrating with backend services. Passionate about continuous learning and broadening knowledge, with a keen interest in understanding user needs and contributing to product strategy and development.

Experience

Jio Platforms Limited

Oct 2023 – Current

Role: Software Developer

- Collaborated with cross-functional team to develop an automation portal for automating the manual tasks and enhancing operational efficiency.
- Led the design and development of a responsive and user-centric frontend using React Js, integrated frontend components with the backend APIs, contributing to the core backend functionalities.
- Managed project timelines and ensured milestones were met by coordinating with teams and tracking the progress, created and prioritized user stories based on the requirements and aligning them to the goals.
- Worked on building a secure user management system for role-based access to the portal with the help of JWT authentication.
- Developed and integrated the knowledge base module that enabled the users to upload the SOPs and write articles in the same, thus enhancing the portals resource repository.
- Participated in active code reviews to ensure high code quality, providing and receiving constructive feedbacks to enhance the code base. Engaged in discussions to address issues and implement improvements thus fostering the culture of continuous learning and collaboration.
- Contributed to the deployment and management of the application on the Kubernetes server, utilizing azure pipelines for continuous integration and delivery.

Sparks Foundation

Oct 2021 – Nov 2021

- Tasked to build a bank management system that manages the transactions from one account to the other and to show the history of all the transactions carried out by different users.
- The front end was built using basic html, CSS, Bootstrap and for the backend for managing the transaction Flask-python framework and MySQL was used. HTML, CSS, Bootstrap was used for the creating and designing web pages. Flask a python framework used for routing and MySQL managed the data of the user and the money deposited by each.

Skills

- Languages: Python, Java-script
- Client: HTML, CSS, Bootstrap, React Js
- Server: Node-Js, Express-Js, SQL, MongoDB
- Git, Docker, Kubernetes

Education

Fr. Conceicao Rodrigues Institute of Technology	2023
Bachelor of Engineering - Information Technology CGPA: 9.50	
B.K Birla College, HSC	2019
Major: Science Percentage: 73.85%	
Holy Cross Convent School, SSC	2017
Major: Mathematics Percentage: 90.0%	

Projects

PET360 – Ecommerce website for pet products

Technologies: NodeJS, React, MongoDB, Express Js, JWT

Role: Frontend developer

Context: Designed and implemented a pet-product based E- commerce website that shows the best sellers based on the most purchased pet-products. The admin can add or delete products from the website. The website also offers add to the cart facility for the customer to add the products they wish to purchase.

Sign Language Recognition Using Deep Learning

Technologies: Numpy, Matplotlib, Mediapipe, OpenCv, Flask, Tensorflow and Keras.

Role: Collected, preprocessed, and annotated datasets for training and testing the model, worked on the user interface for making it application friendly.

Context: Designed and implemented Sign Language Recognition using Long Short Term Memory Model that differs from the previous model built using YOLO. LSTM makes use of Recurrent Neural Networks that retains the data collected and forgets the irrelevant ones using input and forget gates. The GUI makes it easy to access the model and learn the signs on daily basis.

Certifications

- Complete Web & Mobile Designer in 2023: UI/UX, Figma – credited by Udemy, August 2023
- Full Stack Web Development with ReactJS, React Native, Angular – credited by Udemy, June 2022
- Programming Foundations with Java script, HTML and CSS – credited by Coursera, July 2021
- Programming for Everybody (Getting Started with Python) – credited by Coursera, Jun 2020

Additional Information

- Member of the Documentation Committee in the University Departmental Computer Society of India committee.
- Paper Presentation with title “Sign Language Recognition using Deep Learning” in “International Conference on Intelligent Computing & Networking”.
